

Biofuels are within reach when you follow a leader you can trust.

New fuel standards and demanding emissions regulations are in place, but blending ethanol in gasoline presents challenges – from vapor pressure limitations to distribution complexity. The solution? Bioethers from CDTECH.

Bioethers will enhance your bio-ethanol program with a product that's ideal for blending into gasoline and meets the objectives of both farmers and refineries. Bioethers help to increase fuel availability, reduce olefins, and can be blended right at the refinery. With over 70 licensed ethers plants, CDTECH has proven, sustainable technology you can trust.

From the innovators at CDTECH

- > CDEtbe® and CDTae® processes for biofuels
- > Advanced options for MTBE unit conversions
- > CDAlky® process for improved alkylation unit performance
- > Butane conversion to alkylate
- > CDHydro® and CDHDS® processes for low-cost routes to cleaner burning gasoline with maximum octane retention
